

DIGITIZE — YOUR SILVER RECOVERY

Silver Recovery - Processor Monitoring System

Eliminate problems with electrolytic recovery systems and monitor the replenishment of your film processor

SIMPLE - SILVER RECOVERY

The Metafix Silver Recovery - Processor Monitoring System is a two-tier system. Featuring a highly accurate pumping unit (MBX) that includes a live online probe to monitor the pH of the processor effluent while the Patented MiX exchange Columns remove the silver to achieve compliance with strict EPA requirements for Silver and pH allowing you to discharge your film processor effluent with confidence.

Industry standards recommend: *“Daily measurements of pH values for the developer and fixer can then be plotted to observe the trend of variations in these values compared to the normal pH operating levels to identify problems.”* The online pH probe transmits routine readings to our cloud-based database; MetaTrax. Defined users will receive daily reports detailing the film processors solution volumes, combined pH readings and estimated film consumption. Users can be alerted immediately via email if the system detects any anomalies. This ensures your films are processed to meet industry and customers high standards.

With the MetaTrax data, Metafix can precisely determine the life of the patented MiX silver recovery columns and notify you when they need to be changed, ensuring optimal recovery and compliance. We are so confident; we pay our customers on the volume treated*, eliminating the long wait for refining results.

KEY BENEFITS of pH monitoring & MBX system:

- Monitor film processor replenishment in real time.
- FAST Silver recovery - 1 Liter/ Minute - No storage Tanks.
- Developer and Fixer treated together - 100 % Silver.
Final effluent is commingled for easy compliance sampling.
- Low maintenance, No scrapping, No drain problems.
- Customers paid on volume, not refining results*.
- Internet monitoring enables data logging and Live alarm notification.
- Optional Wash water treatment available.

* Some restrictions may apply to volumetric

REPORT LIVE

The Metafix MBX system is Internet ready, transmitting captured data to our cloud based system; MetaTrax. Customers receive daily system reports and live alarm notifications via email or SMS text warning of any deviations in the film processor readings.

INSTALLATION REQUIREMENTS

- > Internet line
- > Water line
- > 120v connection
